The training is divided into six semesters distributed over three years for a bachelor's degree and four semesters for a master's degree, with continuous monitoring and practical tests linked to a final exam to assess students' knowledge and skills. You must choose between the three majors offered by the department, which are electronics, automation, and telecommunications.

A degree in electronics provides students with the opportunity to continue their higher education in a master's or doctoral degree, in various fields of electronics such as robotics, automation, and system control. This allows graduates in a specific field of electronics to gain additional skills and knowledge required in various sectors, including equipment manufacturers, network operators, and mobile phone companies. Graduates can also continue their studies to obtain a master's or doctoral degree.

During the training, students will acquire knowledge and skills in automation, particularly in leadership, system design, and control of industrial processes. Graduates of this specialization can continue their studies in Master's and Doctoral programs or find professional opportunities. Therefore, this training offers students many opportunities in various sectors such as equipment manufacturers, network operators, and mobile phone companies, including employment in public and private sectors, including equipment manufacturers, network operators, and mobile phone companies. Graduates can also continue their studies to obtain a master's or doctoral degree.
